

MD to PDF conversion

Overview

Looks for any md files with names (case-insensitive) starting with “README” and creates a PDF format.

Implements this command to build a docker container (note svg is not working, use png format for images instead).

```
docker build -t pandoc-with-rsvg -f Dockerfile .
```

Runs this command with the specified files in entrypoint.sh

```
docker run --rm -v ${PWD}:/data pandoc-with-rsvg
```

Troubleshooting

Issue of figures not appearing in PDF file: - Do not use .svg format for image files - Pandoc has multiple restrictions on html formatting. Use their native format instead (see [here](#) for more information.)
